Según la morfología de las células epiteliales

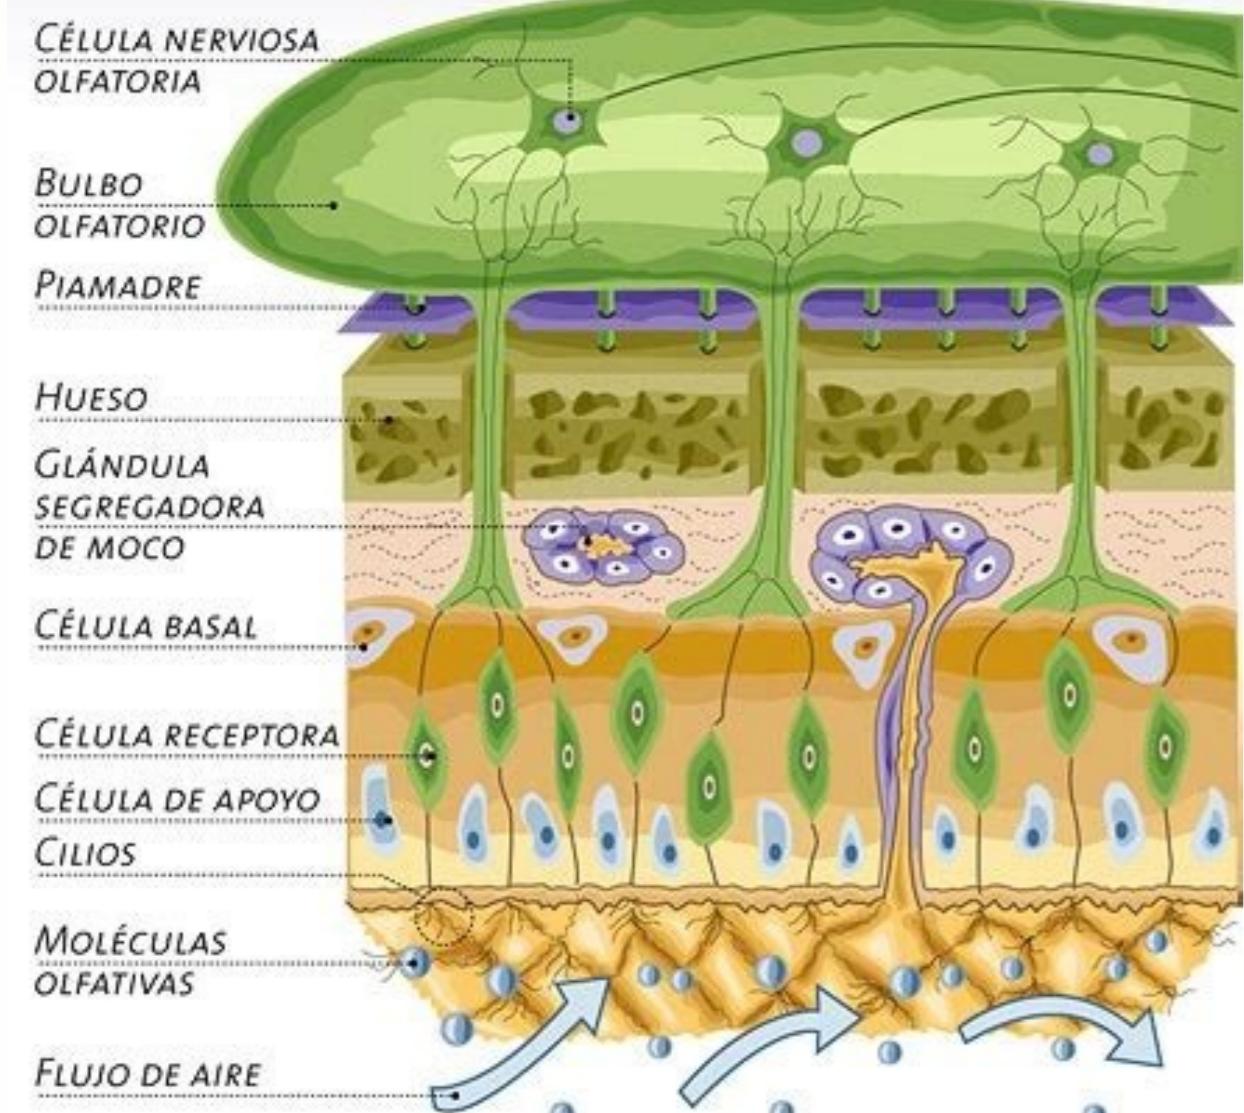

MUCOSA OLFACTORIA

¿Cómo percibimos los olores?

En la pituitaria amarilla, ubicada en la parte superior de las fosas nasales, se encuentran tres tipos de células: las de sostén o apoyo, las receptoras u olfatorias y las basales. Los cilios de las células receptoras reciben los estímulos químicos, provenientes de las sustancias volátiles (moléculas) que entran a la nariz y los transforman en impulsos nerviosos que envían al bulbo olfatorio donde son derivados a los centros olfatorios de la corteza cerebral.

Como cuidar la glandula pineal. Glandula de bowman función. Glandula de bowman histología. Glandula olfatoria de bowman. Glandula de tyson como eliminar. Como funciona la glandula tiroideas. Glandula de bowman função. Glandula de bowmann.
